Subject Index

Compiled by Lawrence Errington

A
Acetams, memory retention and effects of 505
Acetylcholine receptors 104–111, 283
  assembly 281–282, 283, 283–284, 285–286
  depolarization-induced suppression of inhibition 338
  evolution 122, 124, 126
  insect 104–111
  muscarinic, see Muscarinic ACh receptors
  nicotinic, see Nicotinic ACh receptors
  synaptogenesis and 197, 198
Acetylcholine transporter, vesicular 218–224
ACTH and mood disorders 6–9
Actin cytoskeleton and Rho proteins 497–498, 500
Action potentials, evidence for penetration of terminal arborizations 99–103
Activity-dependent presynaptic facilitation or neuromodulation (ADPF) in *Aplysia californica* 30, 31, 32, 34
Adenylate cyclases, neuronal signalling and 536–542
ADH, see Vasopressin
Adhesion molecules, cell (CAM)
  CNS antigen presentation and 476
  memory formation and, long-term 502–506
  mental retardation and 168–172
  neural, see NCAM
Adrenal cortex (in hypothalamic–pituitary–adrenocortical system), antidepressant actions and 6–11
Adrenal corticosteroid receptors, nuclear 544–545
Adrenergic chromaffin cell exocytosis compared with noradrenergic cells 440–441 (L)
Adrenoceptors, ageing or age-related disease and 204
Adrenocorticotrophic hormone and mood disorders 6–9
Adrenoleucodystrophy 289
Advanced glycosylation end products and Alzheimer's disease 172–177
Affective disorders, see Depressive disorders
Afferent(s)
  muscle–spindle, acting as interneurons during mastication 441 (L)
  synaptic transmission in lamprey locomotion, presynaptic modulation and 275
Afterhyperpolarization, long-lasting or slow (sAHP), lamprey locomotion and 274, 276
ω-Aga IVA and Ca^{2+} channels 90–97
Ageing 203–206, 483–484 (L)
  Alzheimer's disease and 173
  membrane alterations causing impaired signal transduction in 203–206, 483–484 (L)
Agelenopsis aperta toxin and Ca^{2+} channels 90–97
Aldehyde dehydrogenase, retinoic acid-generating class-1 546
Allergic encephalitis, experimental (EAE), CNS antigen presentation in 478
α1 subunit of Ca^{2+} channels 92
Alzheimer's disease 172–177, 203–206, 341–342, 483–484 (L), 494–495
  cholesterol and 483 (L), 484 (L), 493

Globus pallidus, adenylate-cyclase mRNA expression 538, 539
Glucocorticoid(s) 502–506
  cytokines and 135
  long-term memory formation and 502–506
Glucocorticoid receptors (GR)
  antagonists, memory retention and effects of 505
  mood disorders and 7–9
  nuclear 544–545
Glucuronic acid, sulphated 185
Glutamate receptors 161–168
  ligand-gated ion channels of 161–168
  locomotion in lampreys and 271–272, 273–275
  metabotropic, see Metabotropic glutamate receptors
  visual system 359–360
Glutamine-repeat sequences of androgen receptor in spinal and bulbar muscular atrophy 460
Glycans as neural recognition molecules 183–191
Glycine receptors
  evolution 122, 124, 127
  inherited startle syndromes and 80–82
Glycoprotein(s)
  as cell adhesion molecules, see Adhesion molecules
  as neural recognition molecules 183–191
  oligosaccharide processing on newly synthesized 188, 189
Glycoprotein-2, sulphated, selective neuronal vulnerability and, 448
Glycosylated lysosomal membrane proteins (LMPs/lamps) 490
Glyc(osyl)ation (in central neuropathies) 172–177, 341–342 (L)
  Alzheimer's disease and 172–177, 341–342 (L)
    advanced 172–177
N-Glycosylation, nACh receptor subunit 297 (L)
GMP, cyclic, NO and 51, 52
Golgi complex and ion channel assembly 285
Gonadal steroid receptors in brain 545
gp130 (cytokine receptor) 86–87
Grafting, neural, stem cell use for 467
Granule, secretory, IP_3 receptors and 157–161, 340–341 (L)
Granule-cell opioids and hippocampal plasticity 350–355
Grasshopper, growth cone behaviour 113
Green fluorescent protein 243
Grey (or grey matter)
  callosal axon growth into 399
  periaqueductal, sexual column 129 (L)
Growth/outgrowth/pathfinding (of neurone/neurite/axon) 111–115, 389–397, 496–501
  cytokine effects 133
  neurotransmitters in regulation of 71–72
  Rho family of GTPases and 496–501
  segmentation and its implications for 487 (L)
  synaptic specificity encoded independently of 199–200
  thalamic 389–397
Growth-associated protein-43 (GAP-43) and exocytosis in adrenergic and noradrenergic chromaffin cells 440 (L)
Growth cones, axonal 111–115, 496–501

- Growth factors
  - oligodendrocyte regeneration and 289, 290
  - stem cells in CNS responsive to 465–467

Old age, see Ageing
Olfactory bulbs
  accessory (AOB), olfactory information processing and 359, 362–363
  main (MOB), olfactory information processing and 359, 361–362

- Olfactory cortex, connections and contiguities between components in 523
- Olfactory information processing, second-order neurones and receptor mechanisms in 359–364
- Oligodendrocyte, regeneration 152, 289–291
- Oligodendrocyte progenitor cell (O–2A) 151–156, 289
  - differentiation 151–156
- Oligomannosidic glycans, function 185
- Oligonucleotides, antisense, see Antisense oligonucleotides
- Oligosaccharide processing on newly synthesized glycoproteins 188, 189
- ON/OFF responses in visual system 359, 359–360, 363, 456–457
- Opioid(s) 350–355
  - in dentate gyrus, see Dentate gyrus
  - hippocampal long-term functional plasticity and role of 350–355
  - memory and 352
- Opioid receptors (in CNS) 22–29, 69–70
  - antisense probes 330
  - mRNA expression in rat 22–29
- Optical approaches to cell physiology 241–243
- Orbital frontal cortex and decision-making 117
- Orientation
  - of lamprey body, neural networks co-ordinating 270–279
  - sexual, hypothalamus and 264–270
- Orphan receptors, nuclear 542–548
- *oscillator* mutant 81
- *Otx* genes 77
- Out-group hypothesis evolution of cortex and 374, 376
- Outgrowth of neurones, see Growth
- Ovalbumin upstream promoter-binding protein, chicken (COUP) 544, 547
- Owl monkeys, cortical areas, comparisons with other mammals 375–377
- Oxygen-derived free radicals
  - Alzheimer's disease and 172–177
  - Bcl-2 localization to sites of generation 358
- Oxytocin receptor in brain 545

P

- P-selectin and neural recognition molecules 187
- P-type Ca^{2+} channels 53
- P$_0$ glycoprotein 185–186
- P_{2X} purinoceptors 224–229
- p3 phage protein and phage display 244
- p53, neuronal vulnerability and 448, 449
- p75 321–326
- Pacemaking, central 230–233, 238
- Pain
  - ascending and descending pathways, opioid drugs and 28
  - IL-2 and 296
- Parallel-fibre synapses on Purkinje cells, LTD 291–295
- Paraventricular nucleus, vasopressin expression 544
- Parietal cortex and grasping 317–319
- Parkinson's disease
  - basal ganglia and 63
  - neurotrophic-factor therapy 463
- Parvalbumin-containing striatal interneurones 530, 531–532
- *Passover* mutant 200
- PC12 cells, see Pheochromocytoma cells
- Pelizaeus–Merzbacher disease 289
- Pentoxifylline and cytokines 135–136
- Peptide(s) (neuro-) 49–50
- Peptide phage libraries 246, 247, 248
- Peptidergic systems, lamprey locomotion and 273–275
- Perception–sensation relationships 331–333
- Perforant-path synapses, opioid effects 351–352
- Periaqueductal grey, sexual column 129 (L)
- Pericytes, smooth muscle, of CNS microvascular endothelium, CNS antigen presentation 480
- *period (per)* mutant 230–239
- Peripheral nervous system
  - cytokines in 84–85, 130–132
    - actions 130–132, Poster (March)
    - expression 84–85
  - cytokines mediating between CNS and 85
- Peripheral neuropathies
  - gap junction-related 256–262
  - neurotrophic factor therapy in 463
    - in diabetes 15–16
- Peripheral regions
  - *Aplysia* sensory neurones and long-term effects of trauma in 137–138
  - cytokine actions in brain influencing function in 132–133, Poster (March)
- *Periplaneta americana*, mACh receptors 105, 106
- Phage display 243–249
- Pharmacology of memory 212–214, 217
- Pheochromocytoma cells (PC12)
  - neurotrophin receptor studies 322, 323, 324
  - P_{2X} receptor cloned from 226–227
  - Rho protein studies on growth cones 498–499
- Phosphatidylinositides, see Inositol monophosphatase; Inositol 1,4,5-trisphosphate
- Phospholipase A$_2$ and G proteins 64–65
- Phosphoprotein research, second messengers and 326 (BR)
- Phosphorylation of NMDA receptors 310
- Photoreceptors 359
  - GABA receptors on synaptic terminals of 118–119, 119
- Physiology, cellular, optical approaches 241–243
- Pigment-dispersing hormone 238
- Piracetam, memory retention and effects of 505
- Pituitary, opioid receptors 27
  - see also Hypothalamic–pituitary–adrenocortical system
- Plasticity
  - basal ganglia 61
  - compensatory, in cerebral cortex 36–43
  - glial progenitor cell 151–156
  - hippocampal, opioids and long-term functional 350–355
  - neuronal, neurotransmitter regulation of 71–72
  - synaptic, see Synapses
- Polyamines and homomeric NMDA receptors 309
- Polyglutamine sequences of androgen receptor in spinal and bulbar muscular atrophy 460
- Polysialic acid 184–185
- Polysynaptic pathways in classical conditioning in *Aplysia californica* 35
- Population-vector analysis in directional motor control 507–508
- Pore, ion channel 281
  - glutamate-gated 163
- Postsynaptic consequences
  - of NMDA receptor activation 252
  - of relieving neurotransmission blockade in dorsal column 102
- Postsynaptic current, inhibitory, hippocampal and cerebellar 335, 337, 338, 339
- Postsynaptic excitatory potentials, see Excitatory postsynaptic potentials
- Postsynaptic mechanisms
  - classical conditioning in *Aplysia californica* 32–34
  - LTP and 252, 254
- Posture
  - lamprey, neural networks co-ordinating 270–279
  - population vector (as predictor of movement direction) and effects of 508
- Potassium ion channels
  - assembly 284
  - Ca^{2+}-dependent, lamprey locomotion and 274
  - of glutamate receptors 163–166
  - insect photoreceptors and 17–19
- Potentiation, long-term, see Long-term potentiation
- Premotor area F5 and grasping 316–317
- Preoptic area, sexually dimorphic nucleus (SDN–POA) 265, 266–267, 267, 269
- Preplate, cortical, thalamocortical fibre guidance and 393–394, 395
- Pre-presynaptic control mechanisms, nerve-impulse penetration to terminal arborizations and 99–103
- Pre-proinsulin transcripts in developing CNS 144–145
- Presynaptic boutons preserving input specificity during interneuronal spread of LTP 365–369
- Presynaptic mechanisms
  - classical conditioning in *Aplysia californica* 31–32
  - lamprey locomotion 275, 278
  - LTP and 252–253
- Presynaptic membrane proteins 177, 182, 193, 194
- Primates, theory of mind in 419–423
  - see also Monkeys and individual species
- Procedural memory and basal ganglia 61
- Progenitor cell, glial, see Oligodendrocyte progenitor cell
- Proinsulin and CNS development 143–150
- Propofol, spinal dorsal-horn neurones and effects of 550
- Prostaglandins in brain 132
- Protease inhibitors and Alzheimer's disease 174
- Protein(s)
  - phage display 244–245
  - transmitters and synapses and 287 (BR)
- Protein-binding sites, peptide phage library for mapping of 246
- Protein kinase A
  - memory and 216
  - synaptic vesicles and Ca^{2+} channels and 198, 199
- Protein kinase C and adenylate cyclases 536, 537
- Proteolytic actions of neuronal hydrolases 489, 490, 493–494

Proton (H^+) antiporter–neurotransmitter gene family, vesicular Ach and monoamine transporters defining 219–220
Protozoan infections and connexin expression 260
Pseudostratified ventricular epithelium, neuronogenesis and 379–383
Psychiatric disorders (neuro-)
  basal ganglia and 61
  gender and 265
Purinoceptors, P_{2X} 224–229
Purkinje cell excitation and cerebellar LTD 291–295

Q

Q-type Ca^{2+} channels 53

R

R-type Ca^{2+} channels 90
Rac and neuritogenesis 498, 499, 500, 501
Radial-unit hypothesis 385–386, 387
radish mutant 214, 216
Ranvier, nodes of, gap junctions/connexin32 and 258, 259, 260
Rat
  cortical areas
    comparisons with other species 377, 472–473, Poster (November)
    connections and contiguities between components 523
    somatotopic map formation 402–407
  human CNS compared with 472–473, Poster (November)
  opioid receptor mRNA expression in CNS 22–29
Reaching movements, visually-guided, control 507
Reading, deblurred evoked potentials during 432, 433
Recapitulation hypothesis 374, 376
Receptive-field dynamics in visual pathways 451–458
Receptors
  binding studies, phage display and 247–249
  cytokines (in general) 86–87
  ligand-gated ion-channel superfamily of, see Ligand-gated ion channel
  potentials, in transduction mechanism for cochlear amplifier 427
  in visual and olfactory information processing 359–364
  see also specific receptors/ligands
Recognition, self-, in humans and other primates, comparisons 421, 422–423
Recognition molecules, neural, modulation 183–191
reeler mutant 389, 390, 391, 395
Regeneration (in CNS)
  basal ganglia 62
  failure in mammals 128–129 (L)
  glial progenitor cell 152, 289–291
  myelin 289–291
  see also Repair
Reovirus receptor 247–248
Repair (in CNS) 62
  glial-cell transplantation and plasticity in O–2A lineage and its implications for 151–156
  see also Regeneration
Reproduction and the suprachiasmatic nucleus 267–268
Response elements, nuclear hormone receptors 544
Reticulospinal neurones, lamprey locomotion and 271–272, 273
Retina 118–120, 515–519
  axonal growth cone behaviour 113, 114
  GABA receptors 118–120, 515–519
  visual information processing and the 359
Retinoic acid receptors (RAR), nuclear 542–543, 546
Retinoid-X receptors (RXR), nuclear 543, 546
Retinotectal axons, NMDA/NMDA antagonists effects on 405
Reward, basal ganglia and 61
Rho family of GTPases and neuritogenesis 496–501
Rhombencephalon, segmentation/organization in 75–76, 78
Rhombomeres 75–76, 78, 485–488 (L)
Rhythms, circadian, see Circadian clocks
RNA, alternative splicing of, NMDAR1 receptor subunit isoforms generated by 306–313
RU38486, memory retention and effects of 505
rutabaga mutant 214, 215, 217
Ryanodine receptors and Ca^{2+} mobilization and sequestration 300–301, 305

S

S182 gene in Alzheimer's disease 436
Sarcoplasmic–endoplasmic reticulum Ca^{2+}-ATPases 301, 301
'Save-wire' hypothesis of minimization of connections for computational neuroanatomy 522
Scanning techniques, see Imaging
Schema theory 316
Schistocerca, mACh receptors 105, 108
Schmidt–Lantermann incisures, connexin32 258, 260
Schwann cells
  connexin32 and 258
  in demyelinating disease therapy 289
  glycans and 187–188
Sclerosis, see Amyotrophic lateral sclerosis; Multiple sclerosis
Secretion in endocrine/neuroendocrine cells, IP_3 receptors and 157–161, 340–341 (L)
Secretory vesicles
  Ca^{2+} and 158–159
  IP_3 receptors and biogenesis of 158–159
Segmentation, neural 74–79, 485–488 (L)
  lamprey locomotion and 272–273, 277
Selectins and neural recognition molecules 187
Self-recognition in humans and other primates, comparisons 421, 422–423
Sensation–perception relationships 331–333
Sensorimotor synapses, LTP in *Aplysia californica* 33–34
Sensory cortex, see Cortex
Sensory neurones
  Aplysia, long-terms alterations induced by injury and 5-HT 137–142
  lamprey locomotion and 272–273
Serotonin, see 5-Hydroxytryptamine
Sexual column in periaqueductal grey 129 (L)
Sexual differentiation
  and dimorphism, nuclear hormone receptors and 544, 545
  of hypothalamus in relation to gender and sexual orientation 264–270
Sexual orientation and the hypothalamus 264–270
Sexually dimorphic structures 265, 266–267, 268, 269
Shortening reflex of leech 34–35
Signal transduction (and second messenger systems) 188–190, 326 (BR)
  adenylate cyclases in neurones 536–542
  in Alzheimer's disease/ageing, impaired 203–206, 483–484 (L)
  mACh receptors and 109
  nuclear hormone receptors and 544
  phosphatidylinositol, Li^+ efficacy in bipolar disorders and 343–349
Smooth-muscle pericytes of CNS microvascular endothelium, CNS antigen presentation 480
SNAP (soluble NSF attachment proteins) 177, 193, 194
SNAP receptors (SNAREs) 177, 182
SNAP-25 (presynaptic membrane/synaptosome-associated protein) 177, 193, 194
SNAREs (SNAP receptor) 177, 182
Sodium channels, epithelial, P_{2X} receptor structure resembling 228
Soluble NSF attachment proteins, see SNAP
Somatosensory cortex, see Cortex
Somatostatin-containing striatal interneurones 528, 530, 533–534
Somatotopic map/organization, cortical 208–210, 402–407
Sound localization in blind cat 37–38
Spasmodic mutant 81, 82
Spastic mutant 81, 82
Spatial sampling in high-resolution EEG, cognitive function studies via 430–431, 432
Spatiotemporal receptive-field structure of neurones in visual pathways 451–458
Species comparisons and differences in cortex 408–417, 472–473, Poster (November)
  visual areas 373–374, 375, 377
Spermine and NMDA receptors 309, 310
Spinal and bulbar muscular atrophy 459–461
Spinal cord
  anaesthetic actions 549–553
  central pattern generator 271, 272, 276–277
  motor/locomotor organization and behaviour
    in frog 442–446
    in lamprey 271–279
  segmentation in 77–78, 485 (L), 486 (L), 487 (L), 488 (L)
  synapse in, anatomical features 251
Spines, dendritic, neuroprotection and 468–471
Spinocerebellar ataxia type I and trinucleotide repeats 440 (L), 460
Spiny projection neurones, chemical/physiological/morphological characterization 527–535
Spliced isoforms of NMDAR1 receptor subunit, alternatively 306–313
Startle syndromes, inherited 80–82
Status epilepticus, neuronal vulnerability in 447, 450
Stem cells, neurones from 465–467
Steroids, see Glucocorticoid; Gonadal steroid; Mineralocorticoid receptors

Stretch receptors, lamprey locomotion and 272–273, 273
Striate cortex, receptive-field structure of cells from 452–455
Striatum (neostriatum)
  adenylate cyclase expression 538, 539
  development, homeodomain genes and 61–62
  interneurones, chemical/physiological/morphological characterization 527–535
Subcortex, axonal branching 398–399
Subplate, cortical, neuronal growth from 393
Substance-P (NK-1) receptor 248, 529
Substantia nigra, adenylate cyclase mRNA expression 538, 539
Sulphated glucuronic acid 185
Sulphated glycoprotein-2 and selective neuronal vulnerability 448
Superior colliculus and audition 39
Superoxide dismutase and motor neurone disease 513 (BR)
Suprachiasmatic nucleus
  rhythms and 238
  sex differences and sexual orientation and 267, 267–268
Suramin and P_{2X} purinoceptors 225
Survival, neuronal
  Bcl-2 protein family and 355–358
  cytokine effects 133
  neurotransmitters in regulation of 71–72
Sylvius, aqueduct of, hydrocephalus as result of stenosis of (HSAS) 168–171
Synapses
  GABA receptor, see GABA-receptor synapses
  IP_3 receptors and 160
  on neighbouring neurones, LTP at 365–369
  neurotransmission, see Neurotransmission; Neurotransmitters
  plasticity
    anatomical observations of changes after stimuli resulting in 251
    compensatory, in cerebral cortex 41
    memory and 213–214
  proteins and transmitters and 287 (BR)
  in retina and olfactory bulb 359
  sensorimotor, LTP in *Aplysia californica* 33–34
  see also Monosynaptic reflex; Terminals and entries under Polysynaptic; Postsynaptic; Pre-presynaptic; Presynaptic
Synaptic vesicles 177–183, 192–195, 218–224
  acetylcholine transport into 218–224
  cycling 192–193
  docking 177, 193, 194
    in *synaptotagmin* mutants 181
  fusion 177–183, 193, 194
    control or modulation of 177–183
Synaptogenesis 196–201, 399–400
  visual cortex 399–400
Synaptosome-associated protein (SNAP-25) 177, 193, 194
Synaptotagmin 177–183
Szentágothai, János (1912–1994) 4–6 (O)

T
T cells and CNS antigen presentation 475–480
T-type Ca^{2+} channels 53
Tardive disorders, basal ganglia and 63
tau (mutant) 235, 236, 238
τ (protein) 174
Telencephalon, segmentation and organization in 77, 487 (L), 488 (L)
Temporal aspects
  of directional motor control 508–509
  of force-field evolution in spinal cord, motor behaviour in frog and 444
  of receptive-field structure of neurones in visual pathways 451–458
Temporal gene expression
  biological clocks and 230–240
  IGFs and IGFBPs 145–146
  memory and 213, 217
Temporal visual area, middle, evolution 378
Terminals, nerve/axon
  arborization 114, 399–400, 404
    cortical 399–400, 401, 404
    nerve impulses reaching, evidence for 99–103
  Ca^{2+} channels in single, co-existence of multiple types 95, 97
  optical methods of monitoring 242–243
  photoreceptor, GABA receptors on 118–119, 119
  see also Neurotransmission; Neurotransmitters; Synapses
Tetrodotoxin (TTX)
  cortical somatotopy and effects of 404, 406
  inhibitory postsynaptic current in hippocampus and cerebellum and effects of 335, 337, 338, 339
TGFβ and the PNS 84
Thalamus
  activity, basal ganglia effects 64
  cortex and, relationships between 371–372, 389–397, 402–407
Theory of mind, evolution 418–424
Thyroid-hormone receptors, nuclear 542–543, 545–546
Time, see entries under Temporal
timeless (tim) mutant 234, 235
TNF, see Tumour necrosis factor
Tobacco hornworm *(Manduca sexta)*, mACh receptors 105, 107, 108
Torpedo, vesicular ACh transporter 218–219, 220
Transcription, vesicular ACh transporter–ChAT gene locus 222–223
Transcription factors (TFs)
  hippocampal granule cell activity and 352, 353
  immediate–early genes and 67
  in spinal and bulbar muscular atrophy, mutation 460
Transduction mechanism for cochlear amplifier, speed 427–429
Transforming growth factor-β and the PNS 84
Transgenes, inducible, memory and 217
Transglutaminase and spinal and bulbar muscular atrophy 460
Transmembrane ion channels, see Ion channel; Ligand-gated ion channels; Voltage-gated ion channels and specific channels
Transmembrane regions
  glutamate-gated ion channels 162, 163–166
  NMDA receptors 307
Transmembrane voltage, multiple-site optical recording 242
Transmitters, see Neurotransmission; Neurotransmitters
Transplantation
  glial progenitor cell 151–156, 289
  in leukodystrophies 289
Transsexuality and the hypothalamus 269
Trauma, *Aplysia* sensory neurones and long-term effects of 137–142
Trinucleotide repeats (and neurodegenerative disease) 440 (L), 459–461
  Huntington's disease 13, 14, 440 (L)
  spinal and bulbar muscular atrophy and 459–461
Trk 321–326
Tufted and mitral (M/T) cells of olfactory system 359, 361–362
Tumour(s), glial, gap junctions and 259
Tumour necrosis factor-α
  demyelination and 290
  PNS and 84, 85
Tumour suppressor genes, selective neuronal vulnerability and 448, 449
Two-photon confocal laser-scanning microscope 241, 242
Tyrosine kinase receptor 321–326

U
unc-17 mutant 218–219, 221, 222

V
Vas deferens, P_{2X} receptor cloned from 226–227
Vascular endothelium in CNS, CNS antigen presentation and 478–479
Vasopressin (ADH)
  in paraventricular nucleus 544
  in subnucleus of suprachiasmatic nucleus, sex differences 267, 267–268
Vectorial summation of population of cell vectors in directional motor control 507–508
Ventricular epithelium, pseudostratified, neuronogenesis and 379–383
Ventromedial frontal cortex and decision-making 117
Vermis, cerebellar 207, 208
Vesicles
  secretory, IP_3 receptors and biogenesis of 158–159
  synaptic, see Synaptic vesicles
Vibrissae, facial
  blind cats, hypertrophy 39–40
  rodent 403
Vision, sensory substitution with loss of 36–43
Visual cortex (visual areas) 397–402
  connections and contiguities in 523
  formation 397–402
  interspecies comparisons in mammals 373–374, 375, 377
  primary, ocular dominance columns in, periodicity 437–439
Visual perception–sensation relationships 331–333
Visual system
  information processing, second-order neurones and receptor mechanisms in 359–364
  insect, voltage-gated ion channels in 17–21
  receptive-field dynamics in pathways 451–458

Visually-guided reaching movements, control 507
Visuomotor transformation with grasping, cortical mechanisms 314–320
Vitamin-D_3 receptors, nuclear 542–543
Voltage-gated ion channels
  for Ca^{2+} 52–53
  in insect photoreceptors 17–21
  ligand-gated and, evolutionary link 167
Volume of neurones, cytoplasmic, regulation 493

W
Whiskers, see Vibrissae
Windows programs, *Neurosim* 556 (SR)
Wire minimization in microchip layout, neuroanatomical positioning of interconnected components treated like problem of 522
Withdrawal reflex in *Aplysia californica* 33, 34
Wnt-1 gene 77
World Wide Web, brain maps and models 474
  Drosophila 481–482

X
X chromosome, L1 mutation on, resulting in mental retardation 168–172
X-EB lesions in CNS 152, 153
Xenopus laevis growth cones 113, 114
X-linked Charcot–Marie–Tooth disease 256–262

Z
Zebrafish growth cones 114
Zinc ions and NMDA receptors 309, 310
